

FAX CHANGE™

integratedUMS
for EnterpriseBusinesses

In the e-communication era, paper faxes decrease the productivity of your company. It is easy to lose it, but it is difficult to monitor or to forward it. FaxChange brings a change. Since now, the fax messages within your company will be delivered as emails, it will no longer be a problem to add your comments and forward them. You will save a lot of money on fax machines and papers, as well as you will save your time thanks to the possibility of sorting and sending fax messages by priority and during cheaper tariff hours. All faxes will be stored in a centralised database. You can be sure, that your company communication is always under your control.

other integratedUMS components

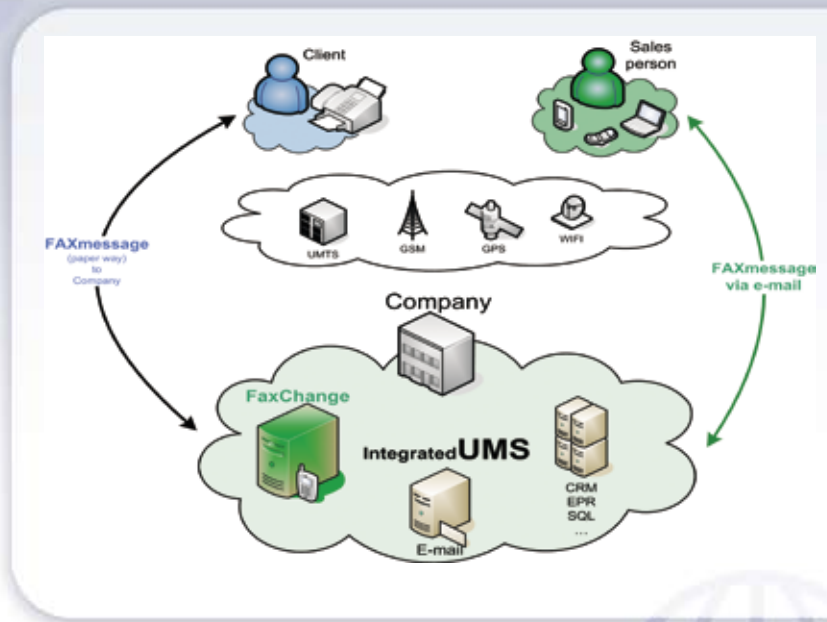

integratedUMS for EnterpriseBusinesses

FaxChange brings an efficient fax messages server which enables you to send and receive fax messages directly from your email account or other applications you are used to.

Our solution is very flexible and can be easily implemented into any organisation. It will pay off to a SMB with few users, as well as to a large organization with frequent fax communication.

FaxChange Standard

Empowers your email account possibilities by connecting it with your fax messages. You will get a unified working environment, check on the fax communication and better fax messages cost overview.

- Send, receive and forward fax messages from your email account as easily, as they were standard emails.
- Receive safely all confidential and private information from your faxes directly to your email box.
- Create a document in any program you want and send it easily to a fax number registered in your computer.
- Information about sending status, time or session count will be sent to your email.
- Save time by sending bulk processed fax messages, with a possibility to set up its priority and time of sending.
- Lower your costs dedicated to fax messages – you do not need any fax machines, other accessories, nor piles of paper.

FaxChange Enterprise

Brings easy integration with your current applications. Make the best of FaxChange without leaving your company system you are used to. Information sharing is our standard.

Other usage possibilities:

- **Automated fax messages** – possibility of sending and receiving fax messages automatically.
- **Bulk fax processing** – send faxes to an unlimited number of addresses with a possibility to use cover pages via application interface.
- Operates with high amounts of fax messages.
- Connectivity with multi-functional equipment is possible.

All fax messages are stored into a centralised database. You will even find messages erased by users in their accounts!

FaxChange is localised into these languages: Czech, Slovak, Polish, Hungarian, Slovene, German, English, Spanish and Italian.

Administration – the administrator allocates authorizations to users or groups, works with the queue of fax messages to be send; for example, the administrator may change its priority or dialled numbers.

Connection to a telephone network can be done by various fax messaging hardware – from unilink analog cards to connection via ISDN E1 (PRI) lines.
